# Project Idea for PythonClt
OneNote like plugin for OpenOffice

OpenOffice is the most popular Open Source document editor. Unfortunately, it does not have any plugins available that allows students to quickly navigate through files like in Microsoft's *OneNote*.

The ability for a student to organize his/her notes in a readily retrievable manner is crucial for proficient note taking. Therefore, there would be a high demand for a plugin that replicates this convenient feature.

Currently, there is an API available for interacting with *OpenOffice* through python called UNO. **Read Here:** http://wiki.services.openoffice.org/wiki/Python

This would be an excellent project to get our hands dirty with some python scripting. It also shouldn't take incredibly long to complete it, depending on how we decide to implement it.
